

ABSTRACT OF THE DISCLOSURE

The invention relates to a dispensing device for drinks or similar dosable liquid foodstuffs, especially coffee, milk,
5 soft drinks or soups. Said dispensing device comprises an identification device for identifying a vertical height of a container for receiving the foodstuff and for emitting a height signal, a filling device which can be arranged in such a way that the height thereof can be adjusted in
10 relation to the container, and a control device which sets the filling device to a pre-controllable filling level in relation to the container, on the basis of the height signal, before the foodstuff is introduced into the container. In this way, a container can be filled in an optimum manner
15 without spilling.
